Healthcare Solutions
Durable Medical Asset Tracking

The Solution

We combine mobile data collection software from MobileFrame with key mobile devices from Honeywell to deliver an integrated durable medical asset tracking solution. We improve patient satisfaction with a smoother inventory process ensuring that your healthcare professionals have the equipment they need at the right time, in the right locations.

Durable Medical Asset Tracking

Driving efficiency and improving patient satisfaction is the goal. Your staff can avoid unnecessary delays in getting patients the equipment they need with our integrated tracking solution. Shorten your true-up timeframes and track equipment that leaves the facility with a combination of RFID and barcode scanning options that are optimized for your environment and facility layout. Integration with your patient record system is available for equipment check out to patients at home, inspection of returned equipment, and billing for these services.

Technology

MobileFrame is a code-free, platform-agnostic, rapid application development platform optimized for mobile devices. Integrate with existing devices and room control systems, or deploy new with great devices from Honeywell. MobileFrame integrates with leading ERP and Business Management applications to provide a means of easily extending your core applications to replace formerly paper-based processes.

Key Benefits

• Improve inventory accuracy of clinical equipment by 20%, which helps with the coorect equipment being in the location needed.

• Reduce time spent on inventory tasks while helping to quickly identify which pieces of equipment are broken, checked out by patients, or out for maintenance and repair.

• Available integration with patient information system allows integrated billing, check in and check out processes for equipment that is taken home by patients.

• RFID and traditional scanning options are available based on your specific facility layout and business needs.
