Healthcare Solutions
Medical Supply Cabinet Inventory

The Solution

We combine mobile data collection software from MobileFrame with key mobile devices from Honeywell to deliver an integrated supply cabinet inventory solution. We improve patient satisfaction with a process ensuring that your healthcare professionals have the supplies they need at the right time, in the right locations, with fewer trips out of the treatment room.

G/S Solutions

Supply Cabinet Inventory Tracking

Driving efficiency and improving patient satisfaction is the goal. By eliminating error prone paper-based kanban systems for supply cabinets, your nursing staff can avoid unnecessary delays in getting patients and doctors the supplies they need. This scanning based solution helps you track not only the available inventory in cabinets, but also more accurately attribute consumption of supplies to patient visits.

Technology

MobileFrame is a code-free, platform-agnostic, rapid application development platform optimized for mobile devices. Integrate with existing devices and room control systems, or deploy new with great devices from Honeywell. MobileFrame integrates with leading ERP and Business Management applications to provide a means of easily extending your core applications to replace formerly paper-based processes.

Key Benefits

- Improve nurse productivity by 8%, reducing hurried visits to grab supplies from adjacent rooms, that frequently, don't get checked out properly.

- Reduce time spent on inventory tasks while helping to quickly identify which cabinets need restocking.

- Improved supply ordering knowledge based on accurate consumption numbers.

- Barcode and RFID scanning options are available based on your specific facility layout and business needs.
